1. The euro area (EA16) consisted of 16 Member States up to 31 December 2010: Belgium, Germany, Ireland, Greece, Spain, France, Italy, Cyprus, Luxembourg, Malta, the Netherlands, Austria, Portugal, Slovenia, Slovakia and Finland. From 1 January 2011 the euro area (EA17) also includes Estonia.

The EU27 includes Belgium, Bulgaria, the Czech Republic, Denmark, Germany, Estonia, Ireland, Greece, Spain, France, Italy, Cyprus, Latvia, Lithuania, Luxembourg, Hungary, Malta, the Netherlands, Austria, Poland, Portugal, Romania, Slovenia, Slovakia, Finland, Sweden and the United Kingdom.

As part of Eurostat's guidelines for the dissemination of data when the EU or euro area is enlarged, the aggregate data series commented on refer to the official composition of the euro area in the most recent month for which data are available. Thus News Releases with data for months up to December 2010 commented on EA16 series, while Releases with data for January 2011 onwards comment on EA17 series.

2. Compared with News Release 24/2011 of 15 February 2011, the trade balance for December 2010 has been revised from -10.5 bn euro to -10.9 bn for the EU27.
3. This News Release is based on data available on 15 March 2011. These are provisional figures based on information provided by Member States. They are subject to frequent revision for up to two years after the month in question. Furthermore, national concepts may differ from the harmonised methodology used by Eurostat, leading to differences between figures in this release and those published nationally, both for raw data and for seasonally adjusted series.
4. Since the introduction of Intrastat for intra-EU trade on 1 January 1993, the value of dispatches has been consistently higher than that of arrivals. In theory, as dispatches are declared FOB and arrivals CIF, the value of arrivals should be slightly higher than that of dispatches. Eurostat uses dispatches as the more reliable measure of total intra-EU trade as, at aggregated levels, total dispatches has better coverage than total arrivals. Due to this divergence in intra-EU trade, and to the difficulties of interpreting figures in absolute terms at the level of individual Member States, trade balances for individual Member States must be interpreted with caution. The same caution applies to the trade balance of the euro area, which includes some intra-EU trade.

## Annex - Seasonally adjusted data

Seasonally adjusted series have been calculated using a harmonised methodology. The seasonally adjusted series give a complementary view of the monthly developments in trade. Seasonally adjusted figures may not match those published by Member States due to differences in the raw data<sup>3</sup>, in the choice of seasonal adjustment model and to the use of series in national currency or in euro.
